

Community Relations / Public Service

Researchers at the Naval Research Laboratory work with local leaders and community outreach centers to teach by demonstration and provide information on environmental issues affecting the local residence. Outreach activities include demonstrations at Earth Day festivities, support of science fairs at regional schools and participation in restoration advisory boards.

Environmental stewardship is an important component in protecting the valuable world resources. Becoming a good environmental steward comes from education and exposure.

A number of excellent programs in your local community provide opportunity to expose young people to environmental issues. Check your local 4-H Council, Extension Programs at local universities and support projects such as the Urban Tree House (USDA Forest Service) and the Student Conservation Association, Inc. (SCA).
